A DRINK WITHIN FIVE MINUTES

Share of street length within a walk of a public drinking fountain, 1.5 km round each city hall, measured along the streets.

Streets within a 5-minute walk (400 m)

Streets within a 2-minute walk (160 m)

Fountains in the seven study areas

Name	Fountains	Fountains per km²	Street km	Streets within 5 min (%)	Residents within 5 min (%)	Fountains from
Rome	210	30.0	147.2	98.6	99.7	osm
Melbourne	122	18.0	153.2	97.6	99.5	official
Barcelona	180	28.1	146.8	96.8	98.8	official
Paris	103	14.6	149.4	94.9	95.8	official
New York	95	18.9	93.6	88.0	92.6	official
Sydney	84	12.7	131.0	85.7	89.5	official
San Francisco	26	3.7	146.6	50.1	62.4	official

Fountains: City of Melbourne, City of Sydney (CC BY 4.0); NYC Parks (NYC Open Data); SFPUC (DataSF, PDDL); Eau de Paris (ODbL); Ajuntament de Barcelona (CC BY 4.0). Streets, Rome: © OpenStreetMap contributors (ODbL). Walking catchments measured in Plotlay (getplotlay.com).

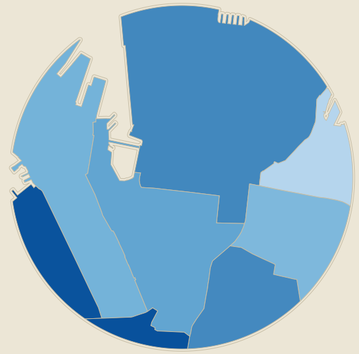

DISTRICT BY DISTRICT

Share of each district's street length within a 5-minute walk of a fountain (darker: more). The title gives the whole study area.

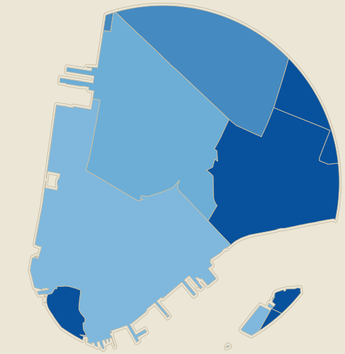

Melbourne: 97.6%

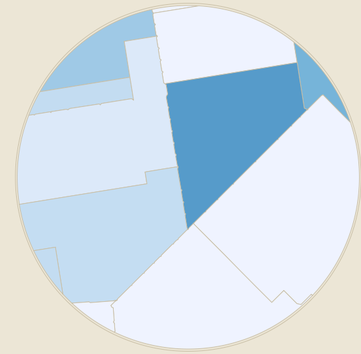

Sydney: 85.7%

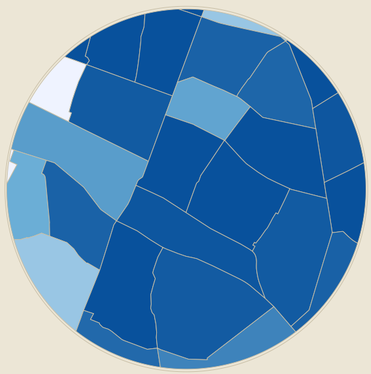

New York: 88.0%

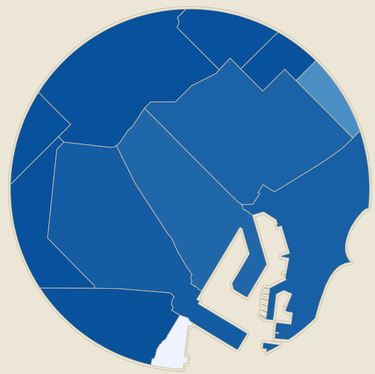

San Francisco: 50.1%

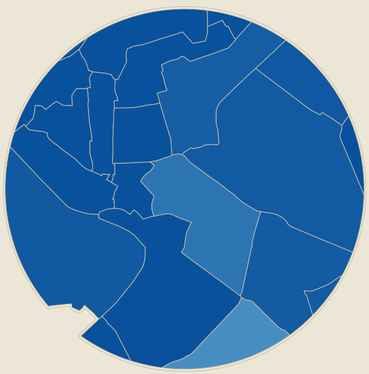

Paris: 94.9%

Barcelona: 96.8%

Rome: 98.6%

How to read it

Each map is one city centre: everything within 1.5 km of the city hall, inside the city's own districts. Districts are clipped to it.
A walk is measured along OpenStreetMap's streets and paths from each fountain; only street centrelines are counted.
Hover a district for its name and fountains. Streets in reach:

- 50% or under
- 85%
- 100%

EVERY DISTRICT

The districts of the city picked, fewest streets in reach first: the share of street length within a 5-minute walk, and the counts behind it.
